5 Ways BV Safe Contact Keeps Workers Safe

1 Geospatially tracks confirmed COVID-19 cases and overlays that data with active client project locations.
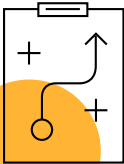

2 Identifies potentially unsafe sites and recommends safer work places at the county level.[1]

3 Monitors exposure potential vs. population density and the spread of the virus over time.[2]

4 Traces the interactions of employees on the job site to record potential exposures.

5 Helps leaders make informed decisions about construction and field workers.

[1]Coverage across the counties of New York.
[2]Addition of wider public data sets is ongoing.
